

OUTLIERS

The Meeting Agent

It logs into Fathom, files every call you have, and writes down what was decided and what was promised.

You do nothing.

A S H L E Y D E A N S M I T H

SECTION 1

What this is

You watched it run on the webinar. This is that agent.

It opens a browser on its own, logs into Fathom, and finds every call you have not dealt with yet. It pulls each transcript in and writes up what happened: what was decided, what was promised and by whom, every person named, and anything left hanging.

No hands. You do nothing.

A call is forgotten in a fortnight. A filed call is searchable for years.

SECTION 2

The one condition, said up front

READ THIS BEFORE YOU DOWNLOAD ANYTHING

This agent does not work on its own. It writes into a second brain, and if you have not got one there is nowhere for it to put anything.

That is not a catch. It is what the agent is: a filer. A filer with no filing cabinet does nothing at all.

A second brain is a folder of plain text files on your own computer that has everything your business knows in it. Section 3 covers what that means in practice and why it is worth an afternoon. Section 4 gives you 3 ways to get one, including a free one you can download in about 5 minutes.

If you already keep your notes in Obsidian, or Logseq, or honestly just a folder of text files, you have got one. Go to section 5 and install the agent.

What a second brain is, and why it is worth an afternoon

The power is not in the software. It is in one place having all of it, in a format that both you and an AI can read.

Every client, every call, every decision, every promise, every idea, in one folder of plain text files on your machine. Claude reads it, writes to it, and works from it.

WHAT THAT ACTUALLY BUYS YOU

On the webinar I opened a person called Kim and showed the room every call I have ever had with him, going back months. Not a summary. The actual record: what he said, what I said, what each of us agreed to do.

I did not type any of it. The agent in this guide put it there.

Multiply that by every person you deal with.

YOU STOP PAYING FOR ADMIN

I used to pay a monthly fee for a CRM, to do data entry, into a system I had to learn first. My second brain replaced it. It cost nothing to set up and nothing to run.

NOTHING LIVES ONLY IN YOUR HEAD OR YOUR INBOX

The most valuable material in most businesses gets said out loud on a call and then evaporates. Yours stops evaporating.

IT GETS BETTER THE LONGER YOU USE IT

Month 1 it is a folder with a few notes in it. Month 12 it is what you open before every call, because it knows more about your own business than you can keep in your head.

YOU OWN IT

Plain text files, on your computer. No subscription. No platform that can change its pricing or shut down. No export problem in 3 years. If you stop using every tool named in this guide, you still have the files.

AND THIS IS THE PART PEOPLE MISS

An AI that knows nothing about your business gives you general answers. An AI that can read 200 of your own calls gives you answers about your actual clients, in your actual words.

Same model. The second brain is the whole difference.

THE HONEST VERSION

Building one takes an afternoon. Still using it in 6 months is a different job, and it is mostly about habit, not software. The most common way to fail is spending 3 weeks designing a perfect structure and never putting anything in it.

Start ugly. Put a real call in it on day 1.

SECTION 4

Three ways to get one

OPTION 1 / DOWNLOAD MINE, FREE

I built one and put it on the internet for nothing. It installs itself: you paste 1 line into Claude Code and it builds the whole structure, the agents, the templates and the memory.

```
github.com/OUTLIERS-ai/second-brain
```

This meeting agent is already inside it. If you take this route you can stop reading at the end of this section. It is the fastest way in and it is the one I would pick.

SECTION 4, CONTINUED

OPTION 2 / BUILD YOUR OWN

Plenty of people would rather understand it by making it. These are the starting points I would actually send someone. Every address below was opened and checked on 18 September 2026.

READ	WHAT IT GIVES YOU
obsidian.md	The app most people build one in. Free, and the files stay on your computer
help.obsidian.md	The official set-up instructions, start to finish
buildingasecondbrain.com	Tiago Forte. He named the idea, and his is the method most people meet first
linkingyourthinking.com	Nick Milo. Better than Forte on how notes connect to each other
zettelkasten.de	The 70-year-old paper method all of this came from. Worth an hour
notes.andymatuschak.org	A working example you can read: his notes about note-taking, inside the system
logseq.com	The main alternative to Obsidian, if you prefer an outline to a page
WATCH	WHY
youtube.com/@TiagoForte	The method explained by the man who wrote the book on it
youtube.com/@linkingyourthinking	Nick Milo. The most practical channel on actually organising one
youtube.com/@ashleydeansmith	Mine. How I use it inside a business, with the agents running on top

Start with Obsidian's own set-up page and 1 video. Not all 10.

SECTION 4, CONTINUED

OPTION 3 / BE TAUGHT IT, WITH OTHER PEOPLE DOING THE SAME

The Outliers Guild is where I teach this properly. You get taught how to build it, you get the agents as I make them, and you are in a room with other business owners building the same system at the same time.

You are not paying for the files. The files are free and the addresses are on the page before this one. You are paying to be shown how it is actually run, and for the room.

If doing it alone is not for you, that is the door.

WHICHEVER ROUTE YOU TOOK

Took option 1? The agent is already installed and you can go straight to step 4 of the next section, the Fathom login.

Built your own, or already had one? Section 5 installs the agent into it.

Installing the agent

STEP 1 / GET CLAUDE CODE

It is at **claude.ai/code**. This is an agent that Claude runs, not a program you double-click. It needs a Claude Pro or Max plan. There is no free route to this one, and I would rather say so here than let you find out at step 4.

STEP 2 / DOWNLOAD THE AGENT

Git is the tool programmers use to copy code. If you have it, run this:

```
git clone https://github.com/OUTLIERS-ai/fathom-meeting-agent.git
```

If you have not got git, open that same address without the **.git** on the end, press the green Code button, and download the zip instead.

STEP 3 / INSTALL THE BROWSER

The agent reads Fathom the way you do, through a real browser, because Fathom has no free way in for software.

```
pip install playwright
playwright install chromium
```

About 200MB, about 5 minutes. Playwright is free and made by Microsoft.

STEP 4 / LOG INTO FATHOM YOURSELF, BY HAND, ONCE

THIS IS THE STEP EVERYONE MISSES

Open the browser Playwright just installed, go to fathom.video, and log in exactly as you normally would. **Take as long as you need.** Nothing is counting down, and nothing will give up on you while you go and find your password or wait for a code. The session is remembered from then on and you will not do this again.

Your agent never sees your password. It never types one, never stores one, and never asks for one. If anything ever asks you to hand a password to an agent, stop, because something is wrong.

STEP 5 / OPEN CLAUDE CODE INSIDE THE FOLDER AND SAY:

```
check Fathom
```

That is it. Afterwards any of these work: *any new calls?* / *process my meetings* / *triage my recordings*.

What you get back

One file per call, named by date and who was on it. Each one opens with a plain account of the call, above the full transcript.

- **What this meeting was.** 1 line
- **What happened.** The facts, in order
- **Decisions made.** Only what was actually decided. If nothing was, it says so
- **What was promised, by whom, and by when.** The most valuable section on the page
- **People mentioned.** Every name, linked to their own note
- **Anything unresolved.** The questions left hanging

Everyone on the call also gets their own note, with this meeting added to their history. So you open a person and see every call you have ever had with them, and what each of you said you would do. That builds itself while you get on with your week.

What it will not do

It describes, it does not interpret. It writes what happened, not what it means. No read on how the call went, no guess at whether the deal closes, no advice. You read the facts in 6 months and make your own mind up.

It never invents to fill a gap. Transcripts are frequently wrong. Speakers get mislabelled, words get mangled, whole passages garble. Where the transcript is unclear it says so and quotes the mess as it found it. It will not smooth a broken passage into a clean sentence nobody said, because that is exactly how a promise nobody made ends up in someone's permanent record.

Anything commercial goes in word for word. Prices, dates, terms and anything resembling an agreement are quoted exactly, never put in other words.

It files and links. That is all. It never replies to anyone, never sends anything, and never acts on a commitment it found.

If you do not use Fathom

The agent is built around 1 service on purpose. Login pages and page layouts are different everywhere, and something that half-works on 5 services is worse than something that works properly on 1.

So on Otter, Granola, tl;dv or Zoom's own recordings, the collecting half will not work. **The filing half still does.** A second agent called the Scribe comes in the same download. Export the transcript from wherever you record, paste it in, and you get the same record with the same links. One manual step instead of none.

Where to stop

Practical limits, not moral ones.

Read, do not act. Have it collect and file. Do not extend it to click anything that sends, posts, buys or messages on your behalf. The moment automation acts outwardly, a mistake is public and you cannot take it back.

Your account, your consequences. Automating a service may be against the terms you agreed to, and enforcement is usually the account rather than a warning. That is your judgement to make, service by service, and the risk is yours.

One job at a time, at human pace. Anything hammering a site quickly looks like exactly what it is. Slow is fine. These jobs run while you are doing something else.

Never point it at somebody else's account.
